

# Solent & Pratt Quarter Turn TOSV

For over 40 years Solent & Pratt has been at the forefront of the design, development and manufacture of high quality butterfly valves for engineering projects around the world. An absolute commitment to outstanding quality and reliability is the key of our success, particularly in environments such as the oil and gas, chemical, petro-chemical and power generation industries.

- **Firesafe**

Certified to API 607 4th edition  
BS6755 Part 2 and API 6FA

- **Sizes**

3" (750mm) to 84" (2100mm)

- **Body styles available**

Wafer flangeless, Wafer lugged, Double Flanged (short and long patterns), and Butt Weld.

- **Anti-blowout stem**

Internal is standard.  
External to API 609 optional

- **Triple Offset Geometry**

Provides non-rubbing motion throughout full 90° rotation elimination unnecessary wear and prolongs life of seat and seal.

- **Pressure ratings**

ANSI 150 through 2500 lb.

- **Zero leakage**

Bi-directional shut-off to API 598, Zero Leakage Capability.

- **Ease of maintenance**

Field replaceable seat and seal ring reduces maintenance costs.

- **Ease of material selection**

Non-galling design enables a wide variety of material options.

- **Bearing protectors**

Bearing protectors are available for the more arduous duties.

- **Live loaded packing**

Is available as an option.

- **Quality assurance system**

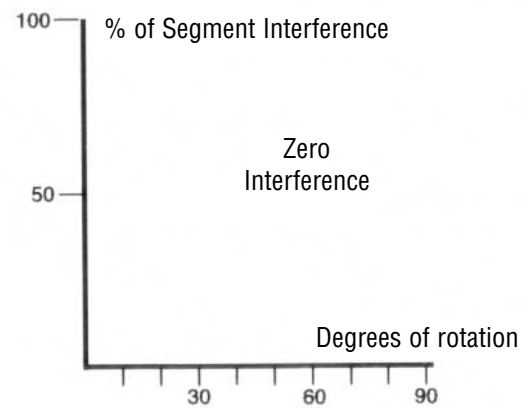

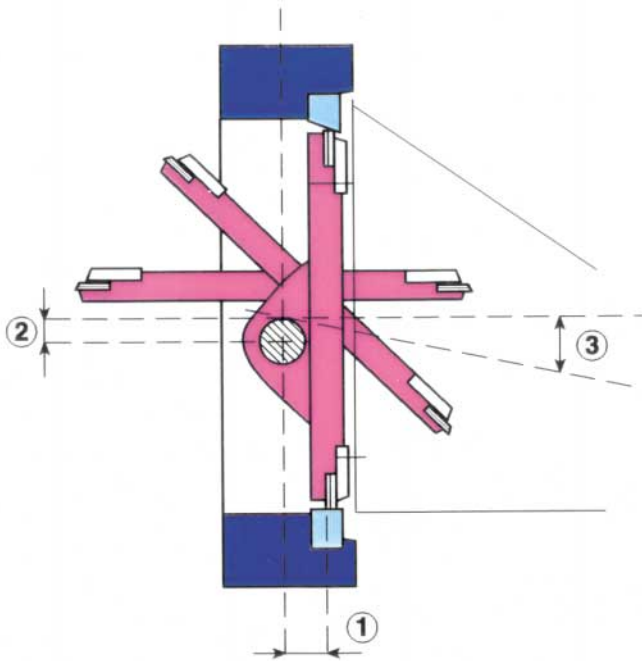

Approved by Lloyds to ISO 9001.

- **Operators**

Valves can be supplied with manual, electric, pneumatic or hydraulic operator. Fail-safe systems for emergency operation are also available.

The Solent & Pratt Triple Offset Segment Valve utilises the well established patented valve geometry where the shaft is offset from the body in two directions (1) and (2), whilst the disc is a segment taken from a cone where the apex is offset from the centre line of the valve (3).

The disc (segment) of the valve houses a field replaceable metal laminate seal whilst the field replaceable seat ring is housed in the body of the valve.

Due to the valve geometry there is no interference or rubbing between seat and seal as the valve strokes through it's full 90°.

Results of Computational Fluid Dynamics (CFD) analysis showing velocity contours.

Bi-directional zero leakage is achieved by a unique principle in which the torque generated by the actuating mechanism is allowed to flex the metal seal within its elastic limits, compressing the seal, thus ensuring that both seal and seat are perfectly matched. This seal resiliency results in zero leakage.

The resiliency of the seal ring and its ability to flex makes the valve ideal for Hot, Cold or Thermal Cycle applications where the body is able to expand or contract without the risk of the valve jamming.

The Triple Offset Segment valve's camming action of the disc as the valve strokes ensures that the metal seat and metal laminate seal are never in contact with each other whilst the valve is stroking. Contact is made between seat and seal only as final shut off position is reached. The tilted cone angle of seat and seal combined with the ellipsoidal geometry allows the seal to touch the seat with a uniform contact angle around its circumference with a slight wedging action being achievable.

This camming motion obtained by the Triple Offset Geometry extends the life of the valve by designing out the continual rubbing of seat and seal as is inherent in conventional rotary valve designs. This geometry makes the TOSV ideal for either control or isolation applications.

Solent & Pratt utilises the latest computer aided design systems and software enabling special design requirements, dimensions and specification to be accommodated.

Our standard valve range however is built and tested to the following standards:

- **Quality assurance**  
Certified by Lloyds to ISO 9001
- **Valve design**  
ANSI B16.34
- **Fire test**  
API 607 4th edition, BS 6755 Part 2 and API 6FA
- **Face to face**  
API 609, BS 5155, ISO 5752, ANSI B16.10
- **Flange**  
ANSI B16.5 (3" to 24"), ANSI B16.47 (28" and larger).
- **Testing**  
BS 6755 Rate A, API 598, API 6D

Double Flanged TOSV

Our flexibility in design enables us to consider any special requirements, please consult our sales office with your needs.

## Options Available

- **Bearing protector** - recommended for arduous duty applications where solids may be present in the flow media.
- **Live loaded packing** - a set of Belleville spring washers fitted to the gland follower provides automatic adjustment to packing.
- **Lantern ring** - available for the packing box.
- **Steam jacket** - integral steam jackets are available on the double flanged body design.

Features	Gate Valve	Ball Valve	Gate Valve	Solent & Pratt	Description
• Replaceable seat and seal		•		•	Triple Offset Geometry with field replaceable seat and seal rings (patent design).
• Zero Leakage				•	Solent & Pratt TOSV Range is able to meet shut off Standards API 598 and API 6D. Zero Leakage Capability.
• Bi-Directional	•	•		•	The TOSV range can provide zero leakage bi-directional shut off with metal sealing.
• Resilient metal seat				•	Torque generated resilient metal sealing provides repeatable long term sealing performance.
• Inherently fire safe	•			•	Tested and certified firesafe to BS 6755 Pt.2, API 607 4th edition and API 6FA, the TOSV range is an all metal construction it's performance is not affected by fire, it is inherently fire safe.
• Non-rubbing design				•	The Triple Offset Geometry of the TOSV range eliminates all rubbing between seat and seal thus extending the performance and life expectancy of the valve.
• Wafer body designs				•	Wafer and lugged body design available to API 609.
• Double Flanged body designs	•			•	Double Flanged designs available to BS5155 (ISO 5752).
• Flanged body designs	•	•	•	•	TOSV is available with face to face to ANSI B16.10 enabling easy replacement of ball, plug and gate valves.
• Lightweight construction				•	Lower piping stresses and construction costs are associated with this design.
• Ease of material selection				•	No galling is possible with this design making material selection simple.
• Cryogenic design	•	•	•	•	Full Cryogenic designs down to -320°F (-196°C) are available.
• Double Block and Bleed design		•	•	•	Double Block and Bleed design available within single valve body.
• Sizes 3" (80mm) to 84" (2100mm)	•			•	Non-standard sizes are available on request.
• Wide pressure rating available	•	•		•	ANSI 150, 300, 600, 900 and 1500 with full rated trims. ANSI 2500lb rating available on request.
• Low torque				•	Lower operating torques compared to comparable designs.
• High temperature available	•	•	•	•	Temperature applications up to 1292°F (700°C) are with this all metal design.
• Ease of actuation		•		•	Rotary action of the valve enables ease of actuation and suitability for either control or isolation.
• Superior gland performance		•	•	•	Rotary motion valves greatly reduce fugitive emissions from gland packing. In addition gland packing life is considerably improved.

Wafer Lugged body illustrated.

Materials tabulated are for standard firesafe applications up to 450 ° C (842 ° F)  
All materials can be certified to NACE requirements.

Item	Description	Qty	Material (Carbon steel valve)
1	Body	1	Steel ASTM A216 WCB

17	Gland packing	3	GRAPHITE
18	End cover gasket	1	GRAPHITE
19	Gland packing (braided)	2	GRAPHITE
20	Seat ring retaining screw	4-24	ASTM A.564 Type 630 Cond. H1150 + H1150
21	Clamp ring retaining screw	4-24	ASTM A.564 Type 630 Cond. H1150 + H1150
23	End cover retaining screw	4	BS.EN.ISO.3506-1 GRD. A4-70
24	Gland plate stud	2	BS.EN.ISO.3506-1 GRD. A4-70
25	Gland plate retaining nut	2	BS.EN.ISO.3506-1 GRD. A4-70
28	Key	1	ASTM A.564 Type 630 Cond. H1150 + H1150
29	Rollpin	1	304SS

## Special Applications

Valve design range is available in most other materials including:

- 316 stainless steel
- Duplex stainless steels
- 6 Mo stainless steels
- Bronze
- Monel
- Incoloy
- Hastelloy B and C
- Titanium
- Zirconium

## Firesafe Test Certificate

The valve design range is certified firesafe to BS 6755: Part 2, API 6FA: API 607 4th editions and BS EN ISO 10497.

Summary from SGS Yarsley Fire Test Report FT/92197/2 for a Solent & Pratt 14 inch class 150 valve for fire testig to BS 6755: Part 2 1987. The leakage rates were as follows:

### 1. Valve in the non-preferred direction

Leakage rate in ml/min	Through leakage rate	Maximum allowed	External leakage rate	Maximum allowed
Burn Period	Zero	5600	Zero	1400
Cool down			Zero	1400
Low hydrostatic pressure test	Zero	560	Zero	280
High hydrostatic pressure test			Zero	2800

**DF - Double Flange design**

**WL - Wafer Lugged body design**
